

# Hunters Brand New Mix & Match Kid's Program!!

Cut the risk of cot deaths by up to 94% Hunter's exciting new Mix & Match Kid's Program.

These fans grow with your family. Change the blades and add-ons as your baby grows. A wide choice to suit all ages.

## Did you know?

Shockingly, around 300 babies a year die in Britain from SIDS. Epidimiologists in California analysed data on hundreds of cot deaths and living babies in 2008. Results from the study published in the journal of American Medical Association showed keeping a fan on led to an 94% reduction in the risk of cot death. This was thought to be due to both preventing the rebreathing of carbon dioxide and the baby overheating.

Ref: <http://www.telegraph.co.uk/health/3146087/>

Launched in Autumn 2008, this fan comes with a range of interchangeable blades so you can change the fan design as your baby grows up.

### Bayport Fan

107cm Bayport fan is the base fan for this program. A selection for children of all ages. There is 7 sets of reversible blades and the originals giving you 16 options. Each Blade pack will contain a matching fandangle as seen illustrated with them.

#### Features:

- \* 107cm Bayport in White
- \* 4 white/maple reversible furniture grade blades
- \* This fan is base fan for the kids program or can be used as a small fan on its own
- \* With an extra choice of 7 sets of childrens reversible blades which offers 14 options for kids rooms
- \* Blade packs include matching fandangles
- \* Whisperwind motor
- \* Wobblefree canopy system
- \* Lifetime motor warranty
- \* Remote and wall control adaptable
- \* Light kit adaptable

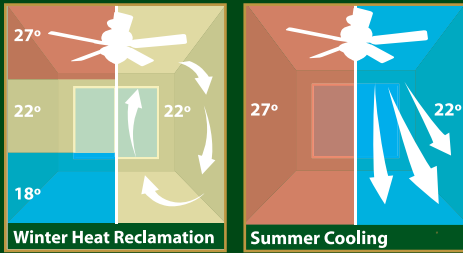

# Why chose a Hunter **Mix & Match** for your child's room?

## Benefits of using a Hunter fan:

- Prevents overheating of the child.
- Prevents rebreathing of dangerous carbon dioxide.
- Reduces allergens in the air.
- Keeps the air feeling fresh.
- Cool in warm weather as it gives a wind chill factor of 5 degrees C.
- Reverse it in winter to bring the hot air at the ceiling downwards (also saving on heating costs).
- Energy efficient – uses less than a 100 watt light bulb to run, 5% of equivalent air conditioning.
- “Whisperwind” high performance motor which is silent, reliable and won't disturb the child's sleep pattern.
- Wobble free so perfectly safe and quiet in any child's room
- Lifetime warranty on the motor
- It is easy to install with no maintenance.

## Getting started:

1. Decide how many rooms you wish to do and select one Bayport per room.
2. Choose your blades. You can even get a few and mix them up.
3. Look at the accessories and decide if you require a light.
4. Decide on what type of control you prefer. It comes with a pull chain but you may prefer to use a remote or wall control instead.
5. Check out the ceiling height and type. If you have a high ceiling then you may decide to lower the fan so you can then select the correct length of extension rod.
6. With three mounting options it will fit any room. It can be mounted flush to the ceiling if your ceiling is low, standard mounting or angled for sloping ceilings

## Accessories
