

## MrKen Hugger Kit – Assembly Instructions

1. Hugger kit – comprises the following parts:
  1. Kit
  2. Ceiling mounting plate
  3. Plastic washer
  4. Screw pack
  5. Can – not included this will already be on your fan motor.

2. On the motor can unscrew 3 of the 6 screws only and place the washer on top and turn the kit upside down to face the can. The 3 remaining screws will fit into the 3 larger holes – see red arrows below. Then screw up the 3 screws tight.
3. The base plate 2 should be screwed into the ceiling ensuring that the screws go into wood, steel or concrete and NOT just plasterboard otherwise it will work loose in time. A wooden cross member between the joists is commonly used.
4. Make the electrical connections using Wago or similar connectors.
5. Slot and twist the edge of the hugger kit onto the mounting place and tighten the 4 screws.
